

VTEQ is a company dedicated to the manufacture of machinery for the automation in the section of Vehicle Technical Inspection. We pride ourselves in systems of Quality, Research and Development, Constancy and Reliability.

The VTEQ team is involved industrially and technically for many years, in the development of machinery for the Technical Inspection of Vehicles.

Having our own development department allows us to adapt our equipment to the technological changes with a lot of agility, transmitting all these improvements to the market in record times.

The successes as a result of the introduction of a quality policy have made us more involved every day in this concept:

QUALITY Thus being the base of all the products/services that VTEQ offers.

VTEQ has available a wide and varied range of products for the Vehicle Technical Inspection, offering the flexibility required throughout the market.

All products are manufactured and designs by VTEQ in the Microsoft Windows® environment.

MicroProcessor based Control in all our equipment.

Totally automatic operation.

Ready to connect external equipment (modular design).

Safety Systems before, during and after the proof.

Soft starters and other elements that guarantee the durability of the components.

Variety of finishes in rollers/colors of the equipment.

All Components are of high quality and recognized brand.
